Moa's Toes

PSEUDOPANAX LESSONII

The shiny, evergreen, leathery leaves of this gorgeous new *Pseudopanax* cultivar are a lush deep green to purple colour and resemble the toes of the now extinct Moa - a giant New Zealand bird which stood 3m tall. Leaf colour darkens with exposure to both sun and cold.

Plants grows best in full sun to part shade in a rich, moist but well drained soil. The thick nature of the leaves mean *Pseudopanax 'Moa's Toes'* is tolerant of coastal conditions. As with all *Pseudopanax*, maintenance is simple and confined to watering and feeding as required.

SIZE	H 2m W 2m
BLOOM TIME	N/A
FOLIAGE	lush deep green to purple
HABIT	Tall/Upright
PROPAGATION METHODS	Cutting
HARDINESS	
USDA HARDINESS ZONES	7+
LICENCE	Licence available world wide
PROTECTION STATUS
