Finn

PRAECOX SUB SPP ORIENTALIS

Agapanthus 'Finn' produces masses of medium sized flower heads, containing up to 60 pure white flowers per head. 'Finn' belongs to an increasingly important group of 'low fertile' agapanthus - those bred specifically to remain sterile (or close to it). 'Low fertile' agapanthus allow gardeners and landscapers to enjoy the many benefits of these amazing plants, without the risk of spreading into the natural environment. Agapanthus provide the perfect solution to mass planting on exposed, dry banks and narrow garden areas adjacent to driveways. They are also extremely hardy to coastal conditions, can be considered fireproof, and their tall summer flower stems make a gorgeous cut flower. Evergreen.

SIZE	H 0.6m x W 0.4 - 0.6m
BLOOM TIME	Late spring, early summer
FOLIAGE	Mid-green, evergreen
HABIT	Tidy and compact
PROPAGATION METHODS	TC Division
HARDINESS	Coastal and wind tolerant
USDA HARDINESS ZONES	8 to 11
LICENCE	Available Worldwide
PROTECTION STATUS	NZ PVR2759
