Sarah

PRAECOX

This gorgeous agapanthus is not only one of the 'low fertile' group, but the world's first candelabra type agapanthus. Low fertile agapanthus are the best environmentally friendly choice – they do not set seed and spread to native habitats and other unwanted areas. Agapanthus 'Sarah' produces good sized, full, flower heads, in which each individual flower is held upright, producing a unique candelabra effect. Flowers are palest lilac-blue, with a noticeably darker central band. The crimped outer edges of the tepals add another layer of attraction and uniqueness to this very feminine plant. Agapanthus 'Sarah' is ideal for many garden uses, from mass planting projects to a single container specimen. Evergreen.

SIZE	H 0.4m - 0.6m x W 0.3m - 0.4m
BLOOM TIME	Spring to autumn
FOLIAGE	Fine, light green. Evergreen.
HABIT	Compact clumping habit.
PROPAGATION METHODS	TC and division
HARDINESS	Coastal and wind tolerant
USDA HARDINESS ZONES	8 to 11
LICENCE	Available NZ, Australia
PROTECTION STATUS	NZPVR2758
